Q: Random hexadecimal in python I have a function that takes a string/number and returns a random hex number. def get\_random\_hex(d): if d > 0: r = (int(log(d,16)) % 0xFF) r = 16 - r return chr(r) else: return "0" However, it will return a random decimal number instead of a random hex number. Does anyone know how to fix it? Thanks in advance A: As user2357112 pointed out, the reason for this is that by the time you make the conversion to hex, the value has already been converted to a string. You're

actually looking for a number of the form x.xxxxxx (where the x's are the number in the decimal string) and not y.xxxxxx (where y is a hex string). This is a common problem in Python, which is why it's recommended to save the string representation of the number to a variable before converting to hex: `def get_random_hex(d): d = int(str(d)) r = (d > 0) and int(log(d,16)%0xff) or 0 r = 16 - r return chr(r)` The National Museum of American History in Washington, D.C. created the exhibition From the Ming to the Modern: Chinese Art from the Solomon R. Guggenheim Museum, which opens Tuesday to Friday, April 4 through July 12, 2009 at the National Museum of American History. The exhibition 04aeff104c
